Requirements

- Installing Python Modules: `pip3 install -r requirements.txt`

- You also need to have a MySQL server running on localhost.

- The data for the database is in a file named `Dump.sql`

Using the Script

- Run the following command to start the program: `python3 gabrus.py`

- The script will ask for the Username and Password for the MySQL Server running. If you want to change the port on which the program will try to connect to, type `y` and press Enter when prompted, then it will ask you for the port.

- After you are logged in, it will show you a menu. Chose the desired option, and chose `option 17` for logout and `option 18` for exitting the program.
